PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience delivering Python backends and React interfaces for EV charging, EV route planning and web search, plus a background in game development with C# and Unity. Builds REST APIs, JWT authentication, role-based access control and event-driven OCPP integrations with Django REST Framework, FastAPI and Flask; creates admin dashboards, user screens and map views with React and TypeScript; ships containerized microservices on Docker and Kubernetes through CI/CD. Developed games at TaleWorlds Entertainment and in personal projects, from an Android runner to a real-time multiplayer board game.

SKILLS

- Python
- FastAPI
- React
- HTML5 & CSS
- Game Development
- Role-Based Access Control
- Microservices Architecture
- CI/CD
- Java
- Django
- Flask
- TypeScript
- C#
- Real-time Multiplayer
- OCPP & Webhooks
- Docker
- Elasticsearch
- TensorFlow
- Django REST Framework
- RESTful APIs
- JavaScript
- Unity
- JWT Authentication
- Event-Driven Architecture
- Kubernetes
- Redis
- Git & GitHub

WORK EXPERIENCE

Software Engineer 11/2025 – Present

Electrinn

- Develop **Django REST Framework** endpoints for EV charge-point management, covering station CRUD and detail views, ownership, claiming with ownership validation, station status and user sessions.
- Implement multi-user **access control** with 4 operations (grant, revoke, drop, user removal) and a 5-step access-request lifecycle (send, receive, accept, decline, cancel).
- Secure every station and account operation with **JWT (Bearer) authentication** and **role-based permission checks**.
- Handle **OCPP** events from chargers through **event-driven** webhook endpoints.
- Build **React** and **TypeScript** admin dashboards, user-facing screens and map and route views on top of these APIs.
- Containerize **microservices** with **Docker**, run them on **Kubernetes** and take part in deployment and configuration work.

Software Engineer 11/2024 – 11/2025

Üstünova Mühendislik ve ARGE

- Developed the server side of **Chargepick**, a live EV route-planning application.
- Created route-optimization algorithms that calculate optimal routes, including charging-stop frequency and duration derived from battery state of charge.
- Exposed real-time route and charging data through RESTful APIs built with **FastAPI** and **Django**.
- Integrated external map and location APIs to provide accurate navigation and station suggestions.
- Partnered with frontend and research teams on EV charging optimization.

Software Engineer
07/2022 – 11/2024

Huawei — Petal Search

- Built RESTful APIs with **Python** and **Flask** for the Petal Search box, part of Huawei's search engine.
- Wrote **Elasticsearch** indexing and query logic for the product.
- Added a **Redis** caching layer to speed up response times.
- Authored **unit and integration tests** to keep releases reliable.
- Provided **production support** through monitoring, debugging and incident resolution.
- Delivered joint projects with frontend, QA and data teams, shipping changes via **CI/CD** pipelines.

Game Developer Intern
08/2021 – 09/2021

TaleWorlds Entertainment

- Developed games with **C#** and **Unity** in a 4-person team.

Software Engineer Intern
07/2020 – 08/2020

Labris Networks

- Worked on web development with **Python** and **Django**.

PROJECTS

Platform Runner
Unity, C#, Android

- Developed a mobile platform-runner game in **Unity** with **C#**, featuring a player character and NPCs, and shipped it as an Android APK.

DragMate
React, TypeScript, CSS

- Built a **real-time multiplayer** board-game platform with HTML5 Drag & Drop interactions.

Pixel-Art RPG Portfolio
React

- Designed a playable top-down pixel-art RPG town as a personal portfolio, where visitors enter buildings and talk to NPCs to discover projects and skills.

BookSwap
Django, React

- Created a full-stack platform for swapping or donating books securely, with user registration, book requests and approvals, donation options and in-app chat.

Decentralized Voting App
Blockchain

- Built a blockchain-based voting application as the university graduation project.

BIST 30 Prediction
Python, TensorFlow

- Forecast BIST 30 stock index data with machine-learning models.

Plant Pathology 2020
TensorFlow

- Trained a machine-learning model to identify plant diseases.

EDUCATION

Bachelor of Science in Computer Engineering
09/2017 – 06/2022

Çankaya University

LANGUAGES

- Turkish — Native
- English — C1 (Advanced)
- German — A1 (Beginner)
